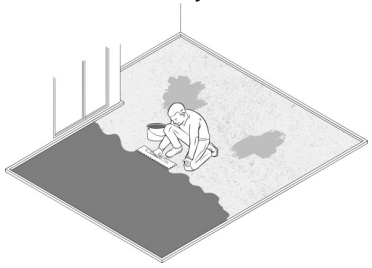
Practical guide

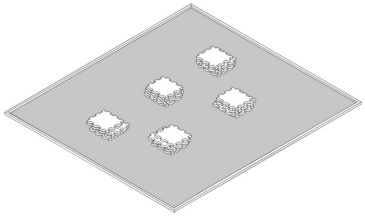
Correct installation of balcony tiles with puzzle (zipper) connection

1 Clean, remove loose pieces, close cracks, seal if necessary.

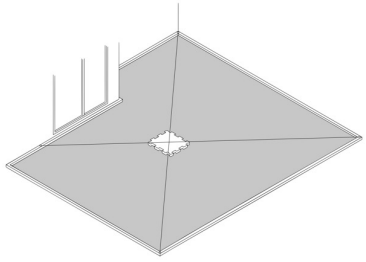


Tip: ALLESDICHT – the rubber membrane from the bucket – seals permanently.

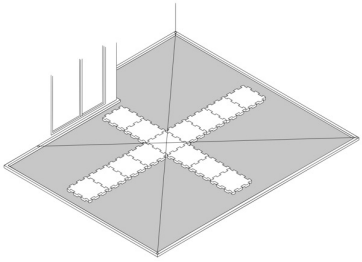
2 Unpack the balcony slabs and sort if necessary.



3 Determine the centre and place the first slab for alignment.

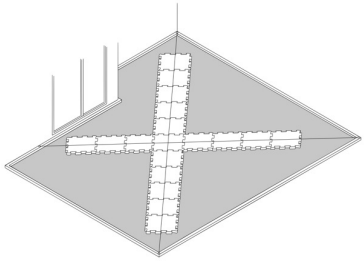


4 Lay additional slabs, checking the effect and arrangement.

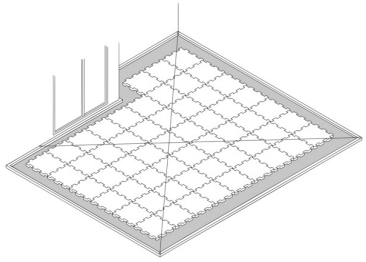


Tip: The edge area must be less than half a slab.

5 Optionally, check the effect of an alternative orientation.

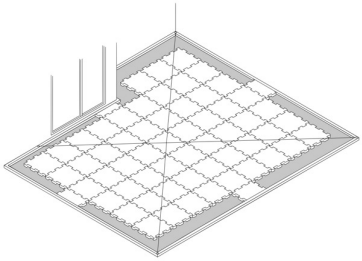


6 Cover the balcony as much as possible with full slabs.



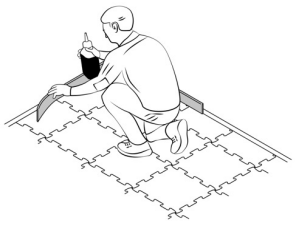
Tip: The layout can still be changed as long as no cutting has been done.

7 One full tile per row is cut into two edge pieces.

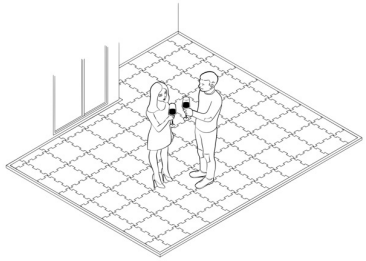


Tip: Use a circular saw or jigsaw to cut the tiles precisely.

8 Adhere the wall trim profiles to the wall with PUR adhesive.



9 Finished! Enjoy your newly designed balcony!



Tip: Sweep, vacuum, wipe, or rinse with water for cleaning.
