

Useful and practical - edging and accessories

WARCO company produces all kinds of construction accessories that may be applied as the **enhancing or edging elements** designed for paths, terraces, playgrounds and sports surfaces. We offer products tailored to the type of a subfloor; you can adjust these accessories to your individual projects according to their functions and dimensions.

Stabilising paving grid

WARCO plastic paving grid has a load bearing capacity of 160 t/m². It is the best material to easily and permanently **stabilise** an unbound **subfloor** and to build an optimal base course for the installation of safety, terrace, balcony tiles or other types of paving slabs. This is an add-on item and is only available with our rubber products.

Stabilising paving grid

£2,60

Elastic kerb

This product is installed as a safe **kerb, road-edging** or edging of a sports surface on an unbound subfloor enhanced by concrete.

Elastic kerb

£20,70

Palisade

Elastic rubber palisades are available in the heights of 40, 60, 80 and 100 cm. They function as safe bordering in case of paths or flowerbeds or a **slope securing element**. Their installation is made throughout inserting a palisade in the subfloor by means of a metal tube integrated in the palisade.

£66,90

Skirting board

The purpose of the skirting board (also called baseboard) is to cover the joint between the flooring and the wall in order to protect the wall from bumps and pollution. WARCO skirting board should be fixed directly to the wall with the adhesive OP83.

Skirting board

£6,90

Wedge-shaped edging

The highest point of this element measures 43 mm. It is adapted to the installation on a bound subfloor (concrete, asphalt, wood) and secures a **smooth transition** from an uneven, unbound base course to the elastic surface with a wedge-shaped edging.

Wedge-shaped edging

£6,70

Elastic wall cap

Concrete or a brick sand box embedded in the subfloor or a free-standing wall may be covered by an elastic wall cap protecting against a potential tripping hazard. In this way, the part of the wall which is covered by a secure rubber cap turns into a **comfortable surface where you can rest**.

Elastic wall cap

£37,30

Glue

By means of durable elastic glue produced on the base of polyurethane, you may secure the rubber granulate products and stick them with each other or **glue** them to the floor.
